

DFR Asia Increases Investment in ChinaNetCloud

ChinaNetCloud is China's leading managed hosting and cloud services provider for digital media and entertainment companies in China.

SHANGHAI, CHINA -- Early stage digital media and entertainment investment firm DFR Asia announced the completion of an additional investment in ChinaNetCloud. Terms of the transaction were not disclosed. In addition to the investment, DFR Asia and ChinaNetCloud will partner to have ChinaNetCloud provide scalable and secure hosting and server management services to DFR Asia group companies.

Founded in 2008 by two Silicon Valley technology entrepreneurs, ChinaNetCloud is one of China's leading experts in server management, cloud computing, and advanced systems architecture. ChinaNetCloud protects companies from common pitfalls affecting many fast-growing media and entertainment firms in China, such as inability to scale and risks associated with attempts to manage large-scale, mission-critical infrastructure in-house. ChinaNetCloud's services also cover 24/7 system support and security and the company's list of clients already includes many of China's most innovative and dynamic digital media ventures.

"ChinaNetCloud solves critically important backend, server, and technology issues for fast-growing digital media and entertainment companies in China. By working with ChinaNetCloud we're able to help our group companies focus on their core business while resting assured that their core technology infrastructure is safe, secure, and ready to meet even the most extreme requirements for rapid growth," said Rick Myers, Managing Partner at DFR Asia.

"We look forward to working with DFR Asia and their phenomenal group of companies. Just as DFR Asia successfully guides media and entertainment companies from early-stage through maturity on the business front, ChinaNetCloud ensures that our customers are ready and able to keep pace with the often explosive pace of growth in China without having to worry that their servers and infrastructure are secure, scalable, and managed according to the most exacting global best practices," expressed Steve Mushero, Founder and CEO of ChinaNetCloud.
